Webinar: Gas Turbine Air Filtration - How to Reduce Your Carbon Footprint

The commitments by governments across the world to reduce greenhouse gases have added pressure on the Power Generation and Oil and Gas industries to find greener solutions. To meet policy demands and targets, it's become imperative for gas turbine operators to cut their carbon footprints and become more efficient.

In this webinar you will discover that one of the easiest, most cost-effective ways to reduce CO₂ emissions dramatically is through the inlet air filters on gas turbines.

Join the webinar and learn how air inlet air filters can help reduce your carbon footprint, the filter characteristics that you should consider, and discover how much you can save.

Tuesday, May 26, 2020 9:00 AM - 10:00 AM EDT

For more than half a century, Camfil has been helping people breathe cleaner air. As a leading manufacturer of premium clean air solutions, we provide commercial and industrial systems for air filtration and air pollution control that improve worker and equipment productivity, minimize energy use, and benefit human health and the environment. We firmly believe that the best solutions for our customers are the best solutions for our planet, too. That's why every step of the way – from design to delivery and across the product life cycle – we consider the impact of what we do on people and the world around us. Through a fresh approach to problem-solving, innovative design, precise process control, and a strong customer focus we aim to conserve more, use less and find better ways – so we can all breathe easier.

The Camfil Group is headquartered in Stockholm, Sweden, and has 30 manufacturing sites, six R&D centers, local sales offices in 30 countries, and 4,800 employees and growing. We proudly serve and support customers in a wide variety of industries and communities across the world. To discover how Camfil can help you to protect people, processes, and the environment, visit us at www.camfil.com.
