## Camfil expands production in Taiwan, another step closer towards the sustainable future

Stockholm, Sweden, 29th March 2021 - Camfil has commenced operation at its new plant in Tainan, Taiwan which will contribute in a circular systematic way to benefit the business, and the environment. The new facility with over 4,000 square metres in area has now started production and will create new employment opportunities and contribute directly towards Camfil's mission for a sustainable future.

The factory will act as a hub for molecular and particle filtration focusing on supporting the growing semiconductor, life science, and turbomachinery

industry and by producing locally, it will help reduce shipping time from other facilities located in Asia. This plant is well equipped with the latest technology and operational capability to adapt the green process to elaborate the Camfil sustainability promises to the customers and the environment. By using our technology, we expect to reduce shipping costs, promote local manufacturing, and reduce waste handling. Our manufacturing process will have a reduced environmental impact as the facility will contribute to reducing waste generation for our customers by adopting a reuse/recycle approach for many filter components.

During the opening ceremony, representative of The Swedish Trade and Invest Council, Mr. Bengt G Carlsson was present and took the stage to highlight the benefits of this sustainable initiative and how it will shape the future of the air filtration market and leading towards reduced waste generation.

*"Camfil is thrilled to announce the start of our air filtration facility that will directly contribute to our commitment to sustainability and promote reduced waste generation through recycling and reusing. We believe that this kind of initiative in manufacturing and operations can be important drivers in the sustainable development of our process and the environment" - James Lin, Managing Director, Taiwan*

---

For more than half a century, Camfil has been helping people breathe cleaner air. As a leading manufacturer of premium clean air solutions, we provide commercial and industrial systems for air filtration and air pollution control that improve worker and equipment productivity, minimize energy use, and benefit human health and the environment. We firmly believe that the best solutions for our customers are the best solutions for our planet, too. That's why every step of the way – from design to delivery and across the product life cycle – we consider the impact of what we do on people and on the world around us. Through a fresh approach to problem-solving, innovative design, precise process control, and a strong customer focus we aim to

conserve more, use less, and find better ways – so we can all breathe easier.

The Camfil Group is headquartered in Stockholm, Sweden, and has 33 manufacturing sites, six R&D centres, local sales offices in 30 countries, and 4,800 employees and growing. We proudly serve and support customers in a wide variety of industries and in communities across the world.
