

A man with a beard and short dark hair is looking down at a large, dark grey industrial air cleaner unit. The unit is rectangular and has its front panel open, revealing internal components like filters and a fan. The man is wearing a dark blue shirt. The background is a blurred industrial setting with a yellow robotic arm visible on the left. The text "Camfil CC X-Series" is overlaid on the left side of the image in white, with "the next generation of industrial air cleaners" below it in a smaller white font. A green horizontal line is positioned below the second line of text.

## **Camfil Unveils CC X-Series: A Smarter, More Efficient Generation of Industrial Air Cleaners**

**Stockholm, Sweden – March 10, 2026** – Camfil, a global leader in clean air solutions, has launched its new CC X-Series, a next-generation range of intelligent industrial air cleaners designed to support cleaner, healthier, and more energy-efficient facilities, particularly in industrial environments such as manufacturing plants, logistics centres, and food production facilities where dust and airborne contaminants can create operational challenges.

Built for today's evolving industrial environments, the CC X-Series combines high-performance PM1 filtration, molecular filtration, long filter life, and

industry-leading energy efficiency to deliver the latest innovation to the market.

### **Engineered for Modern Operations**

The CC X-Series integrates seamlessly with BACnet and Modbus BMS systems, giving facility managers real-time oversight of indoor air quality and system performance.

Its modular design supports multiple configurations—including wall, ceiling, floor, and mobile installation—making it ideal for logistics hubs, manufacturing plants, and food & beverage production facilities.

Airflow capacities ranging from 3,400 to 10,000 m<sup>3</sup>/h ensure scalable clean-air performance for both large and compact industrial spaces.

### **Delivering Clean Air With Lower Environmental Impact**

Long-life filters, reduced maintenance demands, and optimized energy performance make the CC X-Series a forward-looking solution for organisations focused on operational savings and sustainability while protecting people, products and processes.
