Clean Air – a Human Right? Camfil releases Sustainability Report 2024

Stockholm, Sweden – 22 April 2025 – Camfil, a global leader in clean air solutions, has released its 2024 Sustainability Report, highlighting key achievements in reducing environmental impact and promoting safe, responsible business practices across its international operations.

The report demonstrates Camfil's continued commitment to making clean air more accessible while lowering its carbon footprint, and supporting customers in achieving their own sustainability goals.

“Sustainability for us is not just an aspiration – it’s a responsibility,” said **Mark Simmons, President and CEO of Camfil**. “Every filter we create, every process we improve, and every step we take is part of a larger commitment to a healthier, more resilient world.”

Sustainability Report 2024 Key Highlights

- Completion of Camfil’s **first Double Materiality Assessment (DMA)**, identifying the most significant environmental and social focus areas across the value chain for Corporate Sustainability Reporting Directive (CSRD) compliance.
- Over **55% of Eurovent-rated comfort filters** delivered were classified as A or A+, contributing to improved energy performance for customers.
- Launch of the **world’s largest Airborne Molecular Contamination (AMC) filter regeneration facility** in Chiayi, Taiwan – a major milestone for sustainable filtration in the semiconductor sector.
- Significant **renewable energy investments**, including solar panel installations in the UK and Malaysia, which will account for 30-50% of local electricity needs.
- An **8% reduction in total waste compared to 2023**, with **67% diverted from landfill**.

While Camfil continues to uphold its core sustainability principles, the 2024 report highlights a move towards more extensive cross-functional collaboration, greater data transparency, and increased regulatory preparedness. These focus areas are seen as essential to meeting both internal ambitions, the growing expectations of stakeholders, and international initiatives such as CSRD requirements.

The company also expanded employee training in anti-corruption, trade compliance, and business ethics, while reinforcing supplier accountability through updated codes of conduct and enhanced responsible sourcing practices. Together, these efforts support Camfil’s goal of building a more resilient, transparent, and values-driven organisation.

“As we look ahead, we’re committed to helping our customers and partners solve environmental challenges through smarter air solutions,” Simmons added. “This report marks a step forward – and a reminder for all of us that every step counts.”
